

Developer Portal

Tap into our open platform and uncover a new world of fintech possibilities, empowering you to turn your Digital Banking vision into reality.

Digital Insight's Developer Portal provides the resources needed to develop and integrate add-on applications to extend your Digital Banking experience in a continuous effort to meet the unique needs of your institution and customers.

Leverage our self-serve APIs, SDK and third-party software connections to create new and innovative applications. SDK resources support development of your own pages and widgets while ensuring a consistent and seamless user experience, matching the rest of your digital banking channel. The Developer Portal also includes community features where developers will be able to collaborate regarding the use and application of the various services.

Financial Institution Benefits

Innovation: Extend your Digital Banking experience to meet the unique needs of your institution and customers.

Efficiency: Enable faster and more efficient application development by providing developers with self-service tools to browse, access, test and analyze API usage.

End User Benefits

Engagement: Access new, custom applications to meet end users' unique banking and money management needs.

User Experience: Create a seamless, best-in-class user experience with applications developed using Digital Insight's SDK – includes user interface builder, SAML integration and style guides.

Features

The following outlines the various sections of the Developer Portal and associated features.

- My API Use – View your current applications in development, whether completed or in progress.
- APIs – View and test currently available APIs offered through the Developer Portal and all associated documentation.
- SDK – Access the User Interface (UI) Builder tools to create new pages and widgets, leveraging the SAML Integration and style guides for a seamless and consistent user experience.
- App Gallery – Browse a variety of applications that have already been developed to learn what is possible and gain ideas.
- Support – Access FAQs, code samples and means to Contact Us. We also offer a Forum for exchange of information between developers, monitored by Digital Insight team members.

APIs currently available

Authentication - OAuth

- This supports OAuth 2.0 authentication and token services. An access token must be provided on all APIs except for the token API. Use this API to generate an access token.

Banking - Accounts

- The Accounts API is used to retrieve a full list of accounts and account details for a Digital Banking user. All data from accounts that a user has access to are returned, including joint accounts and cross-user accounts. This API is part of the Banking API product.

Messaging - Destinations

- This API lets you manipulate end user messaging destinations. A message destination is a contact point for notifications (i.e. mobile device, mobile number and email address). This API is part of the Messaging API product and is used in conjunction with the Subscriptions API to send an end user an alert or notification.

Messaging - Subscriptions

- This API is used to manage end user preferences for alert and notification triggers. The Subscriptions API is used in conjunction with the Destinations API to manage the alerts and notifications experience for a user. A subscription record always includes a reference to a destination record, which controls the end point for delivery of the alert or notification. The Subscriptions API is also used to request the notification to be delivered and is part of the Messaging API product.

Messaging - Events

- The sendEvent API is used to send an email-based notification or alert. This is a simplified way to send an alert, not requiring a subscription or destination.

...with many more APIs to be added soon!

Access and Usage

Visit the Developer Portal, today: <https://developer.digitalinsight.com>

Access to the Developer Portal features and API integration in test mode are available at no cost. The no-cost features also include the SDK resources – user interface builder, integration and style guides.

Integration with Digital Insight APIs in production mode is available for a fee. For access rights and pricing information, please contact your relationship manager or Team Connect.

Banks and credit unions turn to Digital Insight for innovative online and mobile banking that drives growth. For nearly 20 years, our leading solutions have helped financial institutions engage more meaningfully and more profitably.
