

COLUMBUS400

Entering the premium class

Never Takes a Day Off

The Columbus400 POS terminal helps you serve customers quickly and efficiently, every day of the year. Built to endure the harsh restaurant environment, Columbus400 will never let you down. NCR's newest generation of open hospitality platforms is faster, well-connected and uses less power than previous models. The terminal's value and consistent performance makes it the ideal device for multi-year roll-outs.

Fast and Efficient

The Columbus400 POS terminal utilizes a next generation Intel® Celeron™ processor N3060 (Dual core, 2.48 GHz), which offers great performance and energy efficiency. Multiple operating systems are available, including Windows Embedded POSReady 7 and support for Windows10.

Continuous Operation

NCR Orderman products are specially designed and built to meet the tough requirements of the food and hospitality industry. The retail hardened enclosure design offers a spill resistant, high impact housing that is built to withstand tough restaurant environments. Its fanless configuration reduces the amount of contaminants in the system, further extending the life span of the terminal.

Works Anywhere

All types of restaurants can save valuable space with the countertop enclosure's small footprint and low profile. The power supply is integrated into the housing of the POS terminal, which provides a clean look and saves space. Alongside the integrated power supply, the innovative cable routing with CableLock™ provides a clean workspace. All cables are organized neatly within the housing and are thus kept out of sight.

Well-Connected

With Columbus400 you'll enjoy a great amount of flexibility. It offers numerous interfaces for all conceivable add-ons and upgrades. The POS system has interfaces connecting to your bar system, your printer, the cash drawer, Orderman Secure Radio and much more. The number of interfaces ensures you will be able to use the system for many years.
